REPORT • VERIFY • RECOVER

Project Overview & Review Focus

A smarter way to recover lost belongings

FindEase is a campus-focused web portal that organizes lost and found reports, helps identify possible matches, and supports safer item recovery.

USER

Report a lost item and search relevant found listings.

FINDER

Report a found item and set a private verification question.

CLAIMANT

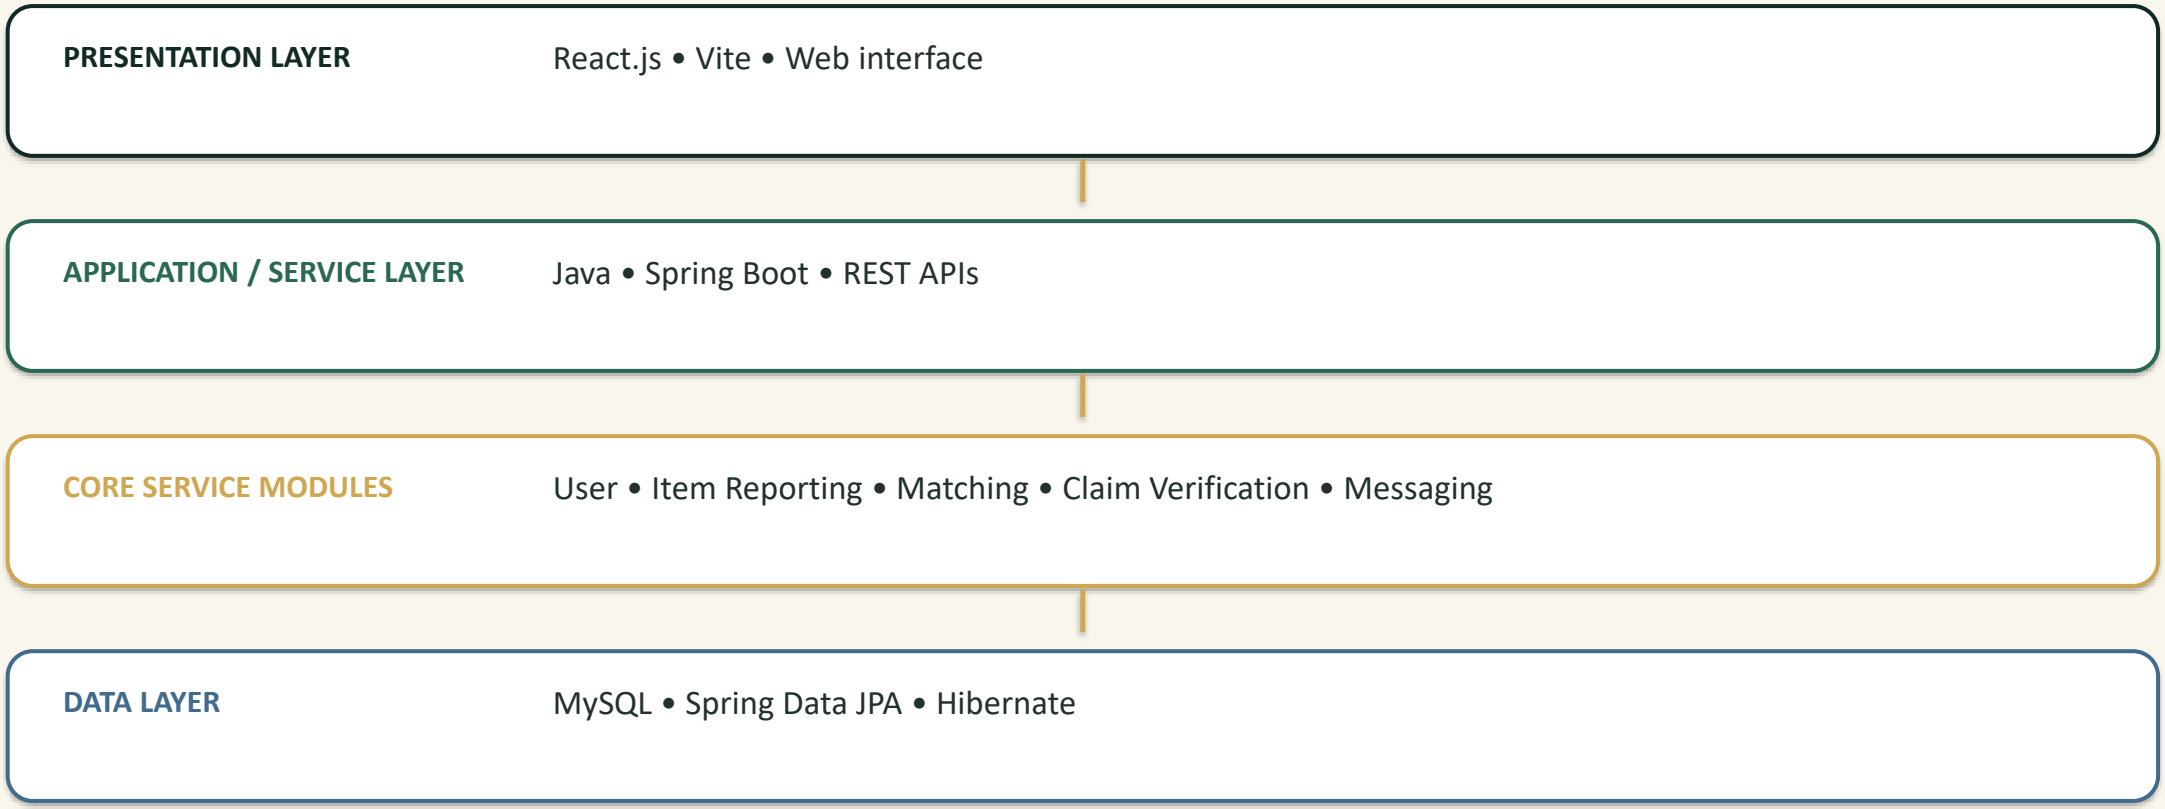

Submit an ownership claim and answer the private question.

FindEase brings together

- Centralized lost/found reporting
- Category- and keyword-based matching
- Private claim review and item-specific messaging

System Architecture

A three-tier design with modular services for reporting, matching, claims and communication.

From Item Report to Recovery

01

REPORT

A user submits a lost-item or found-item report with relevant details.

02

DISCOVER

Users browse listings and search by item category or keywords.

03

MATCH

The system identifies potentially related lost and found reports.

04

VERIFY

A claimant answers the finder’s private challenge question.

05

RECOVER

The finder reviews the claim; accepted claims move to item-specific chat.

Why it matters

A structured workflow makes reports easier to find, adds a review step before handover, and supports communication without directly sharing phone numbers or email addresses.

Service-Oriented Architecture (SOA)

SERVICE	RESPONSIBILITY
User & Access	User registration and account access
Item Reporting	Create and manage lost/found reports
Item Matching	Category- and keyword-based matching
Claim Submission	Submit an ownership claim
Claim Verification	Private question and answer review
Claim Decision	Finder accepts or rejects a claim
Messaging	Item-specific in-app communication
Status Management	Track report and claim progress

Focused modules keep reporting, verification and communication responsibilities separate.

Role-Based User Workflow

REPORTING USER

1. Register or sign in
2. Submit lost-item details
3. Browse found-item reports
4. Check possible matches
5. Submit an ownership claim

FINDER

1. Sign in
2. Submit found-item details
3. Set a private challenge question
4. Review the claimant’s answer
5. Accept or reject the claim

CLAIMANT

1. Open a relevant found-item listing
2. Submit a claim
3. Answer the private question
4. Wait for the finder’s decision
5. Use item-specific chat after acceptance

The same recovery journey connects reporting, claim review and handover communication.

Private Ownership Verification

A verification step helps discourage unsupported claims before an item is handed over.

01 • SET	The finder creates a private question about the found item.
02 • ANSWER	The claimant provides an answer as evidence of ownership.
03 • REVIEW	The finder checks the response and decides whether to accept or reject.
04 • COORDINATE	After acceptance, both users can coordinate through item-specific chat.

Private verification supports safer claim review; it does not guarantee identity or ownership.

Database Design & Data Flow

Users

Account and user information

Lost & Found Items

Item title, category, description and location

Claims

Claim submissions and review decisions

Messages

Item-specific conversation records

Data flow

REPORT — Save lost/found item details

MATCH — Compare categories and keywords

VERIFY — Store claim and finder decision

COMMUNICATE — Support item-scoped messaging

The report describes MySQL storage for users, item reports, claims and messages.

Functional Testing & Validation

AREA	TEST SCENARIO	EXPECTED CHECK
Item reporting	Submit valid and incomplete item reports	Required fields are validated
Matching	Use related and unrelated item keywords	Relevant possible matches are shown
Claim submission	Submit a claim for a found item	Claim is linked to the correct item
Ownership question	Try correct and incorrect answers	Answer is available for finder review
Claim decision	Accept and reject submitted claims	Decision is recorded for the claim
Messaging	Open chat for an accepted claim	Conversation is tied to the item

LIVE DEMO

Demonstrate one complete lost-item recovery journey.

01

Report an item

Create a lost-item or found-item report with category and location.

02

Find a possible match

Browse listings and show category/keyword-based matching.

03

Verify the claim

Submit a claim and answer the finder’s private question.

04

Coordinate recovery

Show the finder’s decision and item-specific chat workflow.

Demo tip: prepare one lost report, one matching found report and one sample claim.

Project Outcomes & Future Scope

WHAT FINDEASE PROVIDES

- Centralized lost/found reporting
- Category- and keyword-based matching
- Private challenge-question claim review
- Item-specific in-app messaging

FUTURE ENHANCEMENTS

- Mobile application
- Image-based and AI-based matching
- Email or mobile notifications
- Location-based search and multi-campus support
- Improved security and an admin dashboard

Thank You
